

Junk File Organizer

Description: Basically, as a lazy programmer my desktop is full of files (Junk Files). Due to the large number of files, it is a daunting task to sit and organize each file. To make that task easy the below Python script comes handy and all the files are organized in a well-manner within seconds.

Module used:

- Sys
- Shutil
- Pathlib

Main functionality of this project:

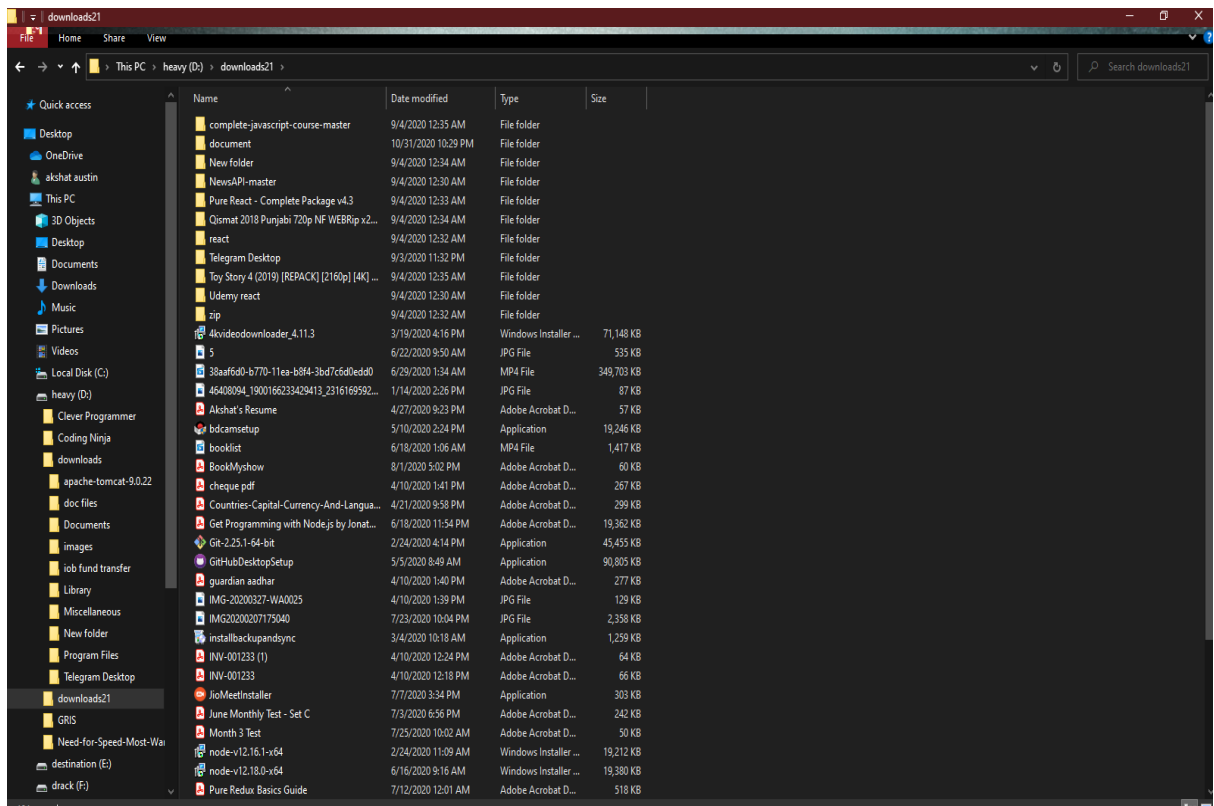

A user can arrange files to specific folder by using extension type.

GitHub link: <https://github.com/attainu/project-Akshat-Austin-au8>

To use this code:

- By extension (type the below code in terminal):
`python project.py --path (path of the folder)`

Before the path look like:

After you type the code the path look like:
